

McELROY MAC-KEY SERIAL NUMBERS

copyright Tom French, W1IMQ - Last updated May 2015 (OH6NT added March 2019)

Linking to this page is welcome. And feel free to copy and reproduce it for non-commercial collector purposes, provided that credit to Tom W1IMQ is mentioned. Be aware your copy (if not updated) may become slightly out of date as I continue to add information.

This list does not contain every Mac-Key serial number; just all of those I am aware of. It is based on over thirty years of collecting McElroy bugs (Mac-Keys) and accumulating information on the keys owned by others, or seen in various places (hamfests and eBay, for example). It updates and expands the list at Appendix E of my McElroy book (see this page for information on the book).

The quantity of keys listed in each group give a good idea of the relative scarcity of the models and variations. The list may also be used to identify your Mac-Key model by using its nameplate type and material, base finish, and serial number, and comparing them to those on the list, but your key should also be verified by comparison to the photos.

Lately I have begun including ownership information on the bugs. A date after the owner's ID usually indicates when the owner acquired the bug (or sometimes when I added the bug to the list). An arrow --> indicates to whom it was transferred.

The various key models are illustrated in photographs on the Mac-Key page link given here.

I have incomplete information on those models missing a variation letter (1936, 1938), so these may not be in their correct sequence.

Please read the NOTES at the bottom of the page. These will explain some differences and the variations in the bugs.

Nameplate styles The "small" plate says "T.R. McElroy." The Navy plate is self-evident. The "large" plate says "Theodore R. McElroy." The plate used on the late bugs (P-500, A-400 and Streamspeed) has no serial number; so these models are not listed. For pictures of the bugs and nameplates, see the Mac-Key page (referenced above).

A caution to collectors. All of the 1934, 35 and 36 models say "9-34" in the cast legend on the bottom of the base. This leads some to think that a 1936 model, for example, is a 1934 model. These bugs can only be differentiated by their design, plate material or (using the list below) serial number.

If your key does not appear here, or to correct a listing, please submit the following information (see home page for mail or email addresses):

..model, or better: photographs of the top, pivot, and left side of the bug.

..nameplate type (and material, if early small plate)

..serial number

..any other information, see list for examples

Model S/N Comments

Small brass plate

1934	5401	possibly... (hard to read) see ad QST Dec 1934 p. 88
1934	5406	Warren K2UV
1934	5450	

The cast legend underneath the base includes "GAD" for "guaranteed." Starting in the later 1935 bugs, a hole was made through the base for the lower pivot screw; this eliminated the D leaving the letters GA.

- 1935 5402 Shallow vee, GAD, one large weight. Later '35 with 2 paddle screws. Ted McElroy --> John KC1MI --> 1999 Tom W1IMQ --> 2013 Jan SM5LNE
 - 1935 5510 Shallow vee, GAD plate is longitudinal and faces left; plated pivot, 2 small weights. Earliest '35: has one screw holding paddles. Tom W1IMQ
 - 1935 5515 Shallow vee, GAD longitudinal plate facing left (Doug Palmer via ebay 10/08)
 - 1935 5517 Shallow vee, GAD longitudinal plate facing left. (eBay 2/07)
 - 1935 5535 Shallow vee, GAD
 - 1935 5548 Shallow vee, GAD
 - 1935 5555 Shallow vee, GAD (info de Fred KT5X)
 - 1935 5587 Shallow vee, GAD
 - 1935 5599 Shallow vee, GAD plate faces left. K5VT estate, W2PM 7/11
 - 1935 5665 Deep vee, GA, plate faces left. Larry N6LM 2/07.
 - 1935 5669 Deep vee, GA, nameplate faces left. Warren K2UV, 8/06
 - 1935 5687 Deep vee, GA, nameplate faces right. Pete W2PM, Jan 2014
 - 1935 5702 Shallow vee, GAD, plate is longitudinal and faces left. Missing knob and paddle (ebay 1/10; won by Gil Schlehman)
 - 1935 5731 Shallow vee, GA
 - 1935 5751 Shallow vee, GA
 - 1935 5754 Shallow vee (at <http://www.americanradiomuseum.org/site/> info from N7CFO)
 - 1935 xxxx Shallow vee, GA; plate missing
 - 1935 5771 Deep vee, GA
 - 1935 5779 Deep vee, GA
 - 1935 5793 Deep vee, GA (Lynn, N7CFO)
 - 1935 5798 Deep Vee, GA, nameplate is longitudinal and faces left
- 1936A:** This has the cast brass pivot assembly as on earlier Mac-Keys, and a U-shaped bar holding the fixed dot and dash contact screws. Some will appear with the brass parts cad plated. The early 1936A bugs have a two-piece, or "split", connector bar.
- 1936A 5033 Two paddles, split conn bar. Broken damper casting. ebay March 2012, won by John W7COI
 - 1936A 5060 Two paddles, split conn bar. K5VT estate --> W1IMQ 2010 --> sold 2014
 - 1936A 5081 Two paddles, split conn bar. Tim K4TJP
 - 1936A 5084 Two paddles, split con bar, with original wood box. Tom W1IMQ
 - 1936A 5089 Two paddles, split con bar
 - 1936A 5636 Two paddles, split conn bar. Tom W1IMQ
 - 1936A 5800 Two paddles, split conn. bar, one weight. The lower pivot screw hole is beveled into the A of GA. ebay 12/2014
 - 1936A 5110 knob/paddle

1936A	5114	Two paddles, set screws in weights, home-made wire dot stab. Ray W2SD estate --> Lou K2EAI 5/07 --> Johnny AC0BQ --> Jim W0EB 4/14
1936A	5117	Two paddles, term holes in base, missing weights and feet
1936A	5118	
1936A	5162	Two paddles
1936A	5167	
1936A	5173	Two paddles
1936A	5235	Two paddles.
1936A	5243	Connector bar repaired, 3 small holes in T bar. (K5VT estate, ebay 12/2011)
1936A	5269	Pin jacks and extra holes added to base; paddles not original
1936A	5271	Two paddles, complete, two plated steel weights. Bill, W4HEX, 10/08
1936A	5278	Knob and paddle (paddle may not be original); one weight. (ebay Dec 2006)
1936A	5281	Missing knob(?)
1936A	5283	Two paddles, with Bayside St. box .. Ray WB6L
1936A	5288	Two paddles, large and small weights, exc cond. ex-W1IQH/W2DGV (1938-1995)
1936A	5296	Two paddles (ebay 11/05), ebay 8/2010 with a paddle and replacement knob (but "will be sold with original paddles").
1936A	5321	
1936A	5335	Cast damper support broken and missing (VT estate 2010, ebay 10/2011)
1936A	5371	Two paddles
1936A	5390	Cast left hand base; missing knob(?)
1936A	5400	
1936A	5739	Nice condition. Phill N0OE 3/2012
1936A	5801	
1936A	5812	
1936A	5825	(1936A based on written descr)
1936A	5861	(on ebay from VT estate 2011)
1936A	5887	Paddle and knob, both weights, cad plated parts, exc condition. Gerry W7ES -> Tom W1IMQ 5/2014
1936A	5894	
1936A	5896	
1936A	5917	
1936A	5925	Complete, nice condition Fred KT5X
1936A	5931	
1936A	5949	Two paddles. One weight. K5VT estate (on ebay june 2011)
1936A	5958	Missing knob
1936A	5965	One weight, no pendulum clip. Otherwisevery good. (on ebay nov 2012)
1936A	5978	

1936A 5979
1936A 5995 Two paddles (home made?), one weight. Paul Mendes, P'town 9/08; on ebay 4/2010.

Small aluminum plate

NOTE: The 1936A and 1936B serial numbers intermix in some areas.

1936A 6548
1936A 6518
1936A 6569 Looks blue (completely painted) including nameplate (assumed to be aluminum) (ebay feb 2009)
1936A 6573 Broken and repaired U-bar. Includes box. (VT estate 2010, on ebay 6/11)

1936A 6597 HB terminals added, base letters damaged
1936A 6603 Complete; repro pendulum clip by VK2IXV. (Herman Willemsen VK2IXV, ex-John K4NP)
1936A 6624 Two paddles
1936A 6649
1936A 6665 Complete, near mint. JEff KE0MT (11/07), on ebay 11/2011, 7/2012
1936A 6696 Missing weights and pendulum clip; on ebay 10/2012
1936A 6727 One weight. VT estate, on ebay 7/2011
1936A 6737 Exc. condition, two large weights, with box. VT estate 2010; on ebay 8/2013
1936A 6673 One weight, two non-original paddles. On ebay 2/2008
1936A 6780 One weight, otherwise complete, original. On ebay 4/2010
1936A 6831 (W1IMQ May 2006)
1936A 6834 One weight, custom paddle (on ebay 7/2010)
1936A 6856 Has two added holes that go thru the "E" in "KEY" underneath (Ebay 10/05)
1936A 6867
1936A 6911 (Model assumed from SN) missing pendulum and weights (Joe WA2USJ Dec 2011)
1936A 6935 No weights. Jeff KE0MT
1936A 6974 One weight, wrong paddle. K5VT estate, on ebay 7/2012
1936A 6984 (VT estate 2010)
1936A 6985 Rusty screws. John Knowles railroadians auction NH 4/10; on ebay 5/10
1936A 6994
1936A 7026
1936A 7028 Given to Don Hawley W4ZU by Ted McElroy in September 1937 (W1IMQ collection)
1936A 7037
1936A 7044 Appears complete and in good condition. (on ebay may 2014)
1936A 7049
1936A 7051 Pendulum removed (conv. to paddle?)

1936A 7052
 1936A 7098 Pete W2PM
 1936A 7124 One weight. Otherwise appears complete, and nice. on ebay Feb 2008
 1936A 7129 Terminals added at back left corner. (ex- SK w9nfk - w5few
 1936A 7161 One weight; missing knob. Includes box (ebay 11/2010)
 1936A 7191 Paddle not original. On ebay 10/2012
 1936A 7254 Terminals on base. T.R. McElroy --> John KC1MI (SK) --> W1IMQ 4/1999 --> Alex HB9DTA 4/2014
 1936A 7293 K5VT estate; ebay 8/2011
 1936A 7305 Good cond., one weight. Has rare tapped pendulum end with a threaded insert (6-32 thread) for an extension. Brad KA1GDG (now W1AY) --> Tom W1IMQ 8/1993 had 1.25" extension reproduced --> Greg G4YZX 5/2014
 1936A 7310
 1936A 7340
 1936A 7345 Rebuilt
 1936A 7355 One weight; with unmarked cord and wedge. On ebay March 2007
 1936A? 7356 Pivot type assumed to be A
 1936A 7370
 1936A 7375 K5VT estate, ebay 7/2011
 1936A 7385
 1936A 7389 Complete, very good condition. On ebay 5/2012 (seller Dave Pennes?)
 1936A 7412 Entire key overpainted aluminum color
 1936A 7420 Missing knob, weights; plate worn. Dirk KB1HKN
 1936A 7460
 1936A 7553 Knob (?)
 1936A 7650 (Aluminum plate assumed) Bill K0CDJ
 1936A 7665
 1936A 7677 One original weight plus a large homebrew weight (ebay 11/2011)
 1936A 7694 Poor nameplate; hole in base and corner of plate; nonoriginal paddle (ebay 4/10)
 1936A 7777
 1936A 7819 John G0RDO
 1936A 7849 Complete except no weights (ebay 1/2012)
 1936A 7861 Both weights, missing knob and paddle (VT estate, on ebay 10/2011); on ebay 8/2013 with replacement knob, Lionel paddle, feet.
 1936A 7862
 1936A 7878
 1936A 7880 Looks very nice; one original weight, small hole in top T-bar. Put on ebay April 2013 by George VE6CX, given to him in 1958 at age 18.
 1936A 7916

1936A	7920	With box (hinges added to lid). K5VT estate, ebay 7/2011, Jim K5MSY
1936A	7926	Good condition. One weight. (ex-WA2BCR, 11/08 Fabio IK0IXI K3QS)
1936A	7930	
1936A	7938	
1936A	8127	Complete, original. Dave WA3LKN
1936A	8130	Complete with both weights, VG condition. (Rick Royston, Santa Rosa Beach FL 7/2010; he put it on ebay 9/2014)
1936A	8163	HB terminals at left rear
1936A	8200	
1936A	8215	Good cond, complete, both weights, nameplate appears lifted on one side (ebay --> W1IMQ 4/2014)
1936A	8208	One weight, nice condition. ebay 11/2010
1936A	8257	Original, complete, excellent. ex-Tom Stack WQ5J ... 5/2007 now Gary Harmon K5JWK
1936A	8260	Complete, original, vy nice condition. ebay feb 2014
1936A	8281	
1936A	8283	Very good cond., one weight. ebay aug 2014
1936A	8291	One large weight. ebay jan 2015
1936A	8357	
1936A	8437	On ebay 3/2012
1936A	8444	HB terms on left side
1936A	8441	Homebrew damper arm
1936A	8477	Appears complete, nice cond., two large weights. (K5VT estate, ebay Dec 2012)
1936A	8482	
1936A	8508	
1936A	8514	
1936A	8520	Ckt closer and terminals added
1936A	8524	
1936A	8532	Two weights, missing knob
1936A	8544	
1936A	8556	Complete with two weights, brass parts cad plated. Mark M6BRN
1936A	8574	Homebrew damper
1936A	xxxxd	Eves Radio decal (no plate), Eves was a dealer in England (Tom W1IMQ)
<u>1936B:</u>		The pivot assembly uses folded steel stock, with separate pivots for the main and dash levers.
1936B	5931	Late, with base terminals
1936B	5987	Base terminals
1936B	6534	
1936B	6637	Base terminals

1936B 6652

1936B 6974 Base terminals

1936B 6976 Base terminals. Broken damper casting (factory? work-around added). Dave WA3LKN Oct 2007

1936B 7008

1936B 7069 Base terminals. Excellent condition, with box. Pericle IK2UIZ Feb. 2011

1936B 7013 Base terminals. Good condition, complete. (on bay jan 2012)

1936B 7073 "Scanlon" scratched on T-bar, circuit closer added. (On ebay 10/2010)

1936B 7075

1936B 7085 Needs good cleaning. On ebay 9/2014

1936B 7089 (No base terminals) Rich W6UDS Jan 2014 --> Chris KJ4MPT Jan 2015 --> sold on ebay by 73vwsuperbug 4/2015

1936B 7091

1936B 7093 No weights.

1936B 7096 Nice condition. Has lead for weights. Said to be from N&W; RR Depot Pamplin VA (Phill NOOE 8/2012)

1936B 7225 Thru pins for plate

1936B 7235 Base terminals

1936B 7260 Base terminals (VT estate, on ebay 4/11)

1936B 7268 Base terminals, one weight, nice condition (ebay 6/08)

1936B 7381 Base terminals, two weights, paddle appears to be older type Vibroplex. Was offered on ebay 5/11 by Matt N7EG

1936B 7506 No terminals. Knob replaced with a paddle. (on ebay 11/2012, 7/2013, 2/2014)

1936B 7509 (VT estate 2010)

1936B 7510 Base terminals; one weight, missing knob (ebay 5/06)

1936B 7655 Dave WA3LKN

1936B 7681 Base terminals

1936B 7697 Base terminals

1936B 7768 Zinc finished parts

1936B 7839 Standard terminals. Gerry W7ES

1936B 7991

1936B 8115

1936B 8120 Nice condition, 2 weights. (ebay Dec 2012)

1936B 8145 Very nice, both weights, terminals on base. (sold on ebay 6/2013 by G3TSS)

1936B 8327 Base terminals, restored base finish and parts. (Tom W8FIB obtained 6/06 ebay)

1936B xxxa Base terminals, no plate, never had one. Richard Meiss WB9LPU and others

1936B xxxb Base terminals, no plate

1936B xxxc No terminals on base; brass finished parts

1936B xxxe Base terminals

Navy plate

The nomenclature on the plate is CMK-26009; these keys have "property of U.S. Navy" cast on the left side.

NAVY	60	ckt closer, stay cord eye between terminals (Lynn N7CFO)
NAVY	75	ckt closer, stay cord eye between terminals (Tom W1IMQ)
NAVY	xx	plate missing (Tony Rogozinski) small aluminum plate (Quotes give left side casting.)

This is the commercial version of the Navy bug. There are a few variations. Most common is the "property of" keys that have "US Navy" ground off; a few of these are cast blank after "property of" (if unstated below, I have no information). Some have "mfd in Boston Mass USA" cast on the side, while the rarest has the left side entirely cast blank. At least one of these keys has a circuit closer (if unstated, I have no information).

1937	6718	"Property of" ("US Navy" ground off)
1937	6789	"mfd in Boston Mass USA"
1937	6842	"Property of" ("US Navy" ground off), very nice condition (sold on ebay 6/2013 by G3TSS to Jim GW0BBO))
1937	6925	"Property of" remainder appears cast blank. One weight, two non-original paddles (ebay 1/2014)
1937	6964	"mfd in Boston Mass USA"
1937	7187	"Property of", has circuit closer. One weight, modern (phillips) paddle screws, 2 small screws on right side of base, unusual looking nameplate. ebay --> Greg G4YZX July 2014
1937	7207	"mfd in Boston Mass USA"
1937	7212	"mfd in Boston Mass USA", no ckt closer (W1IMQ)
1937	7215	"mfd in Boston Mass USA" (John SM5EDX Sweden, March 2007)
1937	7423	"Property of" (remainder appears cast blank, "W" stamped under paint) ebay 9/2012
1937	7480	"Property of" (possibly remainder cast blank) ebay Feb 2012
1937	7489	"Property of" ("US Navy" ground off)
1937	7493	"Property of" ("US Navy" ground off)
1937	7561	No legend (cast blank) (Possibly T.R. McElroy --> John KC1MI --> W1IMQ 1991)
1937	7577	"mfd in Boston Mass USA"
1937	7633	"Property of" ("US Navy" ground off)
1937	7721	"Property of" ("US Navy" ground off). John G0RDO
1937	7726	"Property of" ("US Navy" ground off)
1937	7754	"Property of" remainder cast blank? (poor view). On ebay 5/2012
1937	7755	"Property of" remainder cast blank?
1937	7790	"Property of" (Lynn Cannady 5/06)
1937	7803	"mfd in Boston Mass USA", no ckt closer (Pete W2PM 5/2010)
1937	7884	"Property of" ("US Navy" ground off)

- | | | |
|------|------|--|
| 1937 | 7899 | "Property of" remainder appears cast blank. (Derek G3HSV 8/09) |
| 1937 | 7947 | "Property of" rest probably cast black (poor photo) very nice condition. (ebay may 2010) |
| 1937 | 7996 | "Property of" (Alex, XE1CK, he put it on ebay 2/07, 1/09) |
| 1937 | 8142 | "mfd in Boston Mass USA". No ckt closer. Repainted. (Dave WA3LKN, from ebay 10/08) |
| 1937 | 8262 | "Property of" ("US Navy" ground off); has ckt closer |
| 1937 | 8264 | "Property of" rest cast blank. Unusual nameplate appears stripped of color. Odd pivot frame, it has no ears, similar to A-400 frame but no humps. Has ckt closer. (on ebay 8/2014) |
| 1937 | 8270 | "Property of" (rest cast blank, "James R. Holt" printed in the space.) Has ckt closer. Hole drilled in base nicks nameplate. (W1IMQ 2007 --> William A. Campbell, FL, 2014) |
| 1937 | 8363 | "Property of" (then stamped by owner "L.O. |
| 1937 | 8380 | "Property of" remainder appears cast blank, name lightly stenciled there. No ckt closer. Nice condition, one weight. On Ebay 5/2012, 2/2014 |
| 1937 | 8397 | "Property of" remainder cast blank; no ckt closer. (W1IMQ 1991 --> Claudio IZ0KRC 2014) |
| 1937 | 8402 | "Property of" ("US Navy" ground off) ebay 5/07 |

Large plate models

Notations on the bugs below re dot stabilizers or circuit closers is for informational purposes. No conclusion should be drawn from the lack of a notation.

The 1938 and 39 Deluxe models have the marbleite base, the Standard, models have a black wrinkle base. However on some early 1938A Deluxe models the marbleite overfinish is poor or non-existent and the base appears black. The best and most beautiful marbleite finishes are on the later 1939 Deluxe models.

The 1938 Deluxe models typically came with a circuit closing switch and a dot stabilizer. The early dot stabilizer (a pre-loading device on the pendulum dot spring) was the large type; later a thin type was used.

- | | | |
|------|-----|---|
| 1937 | 391 | This unique 1937 (Navy) type key has "James Michael Kane" cast on left side, and a 1938 "Deluxe" model large plate. Possibly a McElroy employee had this made, or Mac made it for a friend. Considering the nameplate and that it was found with a metal McElroy carrying case (rare) it probably dates to early 1938. Bought on ebay July 2010 by Merv K9FD. |
|------|-----|---|

Unkonwn variation (A or B type pivot lever):

- | | | |
|------|------|------------------------------------|
| 1938 | 604 | Deluxe, dot stab; check pivot type |
| 1938 | 1500 | Deluxe, thin dot stab |
| 1938 | 1712 | Deluxe, shorting switch |

The 1938A has separate pivots for the dot and dash levers.

- | | | |
|-------|-----|--|
| 1938A | 214 | Deluxe, poor finish, large dot stab (K5VT estate, ebay --> W1IMQ 7/2011 -- Alex HB9DTA 4/2014) |
| 1938A | 225 | Deluxe, black, dot stabilizer |
| 1938A | 229 | Deluxe, black, large dot stabilizer |
| 1938A | 237 | Deluxe, large dot stabilizer (VT estate 2010) |

1938A 238 Deluxe, Marbleite, large dot stab. Not orig paddle; one weight (Bob KB1JJD; ebay 10/09; now Greg DF2IC)

1938A 342 Deluxe, Marbleite, dash bar gone, large dot stab.

1939	3480	Deluxe, wrong paddle, no knob or ckt closer, otherwise nice.
1939	3487	Deluxe, presented to Bill Burgess W1BDS by Ted McElroy, Spring 1939 --> Tom W1IMQ 1991 --> Mike N1MX 2014
1939	3498	Deluxe, very good condition, one weight. No stabilizer. K5VT estate; on ebay 3/2015
1939	3506	Deluxe, one weight, wrong paddle. Otherwise very good (ebay 8/2010)
1939	3538	Deluxe, complete, nice. No dot stab.
1939	3543	Deluxe
1939	3550	Deluxe
1939	3560	Deluxe, missing knob and paddle. (on ebay jan 2012)
1939	3566	Deluxe
1939	3570	Deluxe, complete. (ebay June 2006)
1939	3582	Deluxe, from estate of Ed Combs K7VYX, now owned and rebuilt by Frank Geisler W7IS
1939	3598	Deluxe, wrong paddle otherwise complete (K5VT estate, ebay sept 2012)
1939	3602	Deluxe
1939	3607	Deluxe, home-made paddle (no knob). A couple chips on top of T-bar, otherwise nice finish. (ebay 6/2014)
1939	3616	Deluxe, complete. (ebay 2/07)
1939	3619	Deluxe
1939	3639	Deluxe, two weights, non-orig. paddle. On ebay feb, march 2015
1939	3642	Deluxe, missing knob, no ckt closer
1939	3645	Deluxe, one weight & screws by W2GFF. Vibroplex paddle. Marbleite finish is gone. Terry K4RX 11/07
1939	3657	Deluxe, excellent condition, both weights etc. (sold on ebay 9/2013)
1939	3661	Deluxe, (ex-Murray Willer; ex-KK4DW; now Fernando N2FQ)
1939	3663	Deluxe, missing knob
1939	3666	Deluxe
1939	3676	Deluxe
1939	3683	Deluxe, complete, nice condition (K5VT estate 2010)
1939	3708	Deluxe

1939 3710 Deluxe, complete, both weights, excellent condition. With box. Jan. 2015
N3CTC

1939 3727 Deluxe, one weight (missing screw). on ebay jan, feb, april 2015

The Standard, models did not have a circuit closer or dot stabilizer. Notes to that effect are only for confirmation.

1939 ---- Standard, no serial number on plate (NR5Q)

1939 ---- Standard, no serial no. on plate; one weight. Good cond. (Bryan, KB0A, Jan 2013)

1939 6306 Standard, Good condition, both weights. ebay nov 2014. Gary W5GNB 4/2015. Del W8KJP, sold on ebay 4/2015

1939 6317 Standard

1939 6405 Standard

1939 6419 Standard, one weight, missing knob. on ebay 3/2012

1939 6421 Standard, on ebay 2/07 by the Pavcek Museum. Nice, complete, chipped paddle at forward screw.

1939 6460 Standard, Thos Nelson W6EO, purchased 1939 in Bakersfield CA at a shop owned by Cletis, a ham, Mac was the only brand bug he carried.

1939 6494 Standard, complete; broken paddle, some rust. KN1K 9/07. Restored, very nice, Paul G4AFU 3/2015 --> Ed K2ZE (estate) --> Bryan K2BLC, on ebay 4/2015

1939 6502 Standard, no dot stab or ckt closer. Replacement paddle, otherwise complete. (ebay 5/09)

1939 6523 Standard, thin dot stab, no ckt closer. One weight, custom paddle. With steel McElroy carrying case both tagged W7EQC
Fred Kistler from 1940s (W1IMQ collection)

1939 6538 Standard, no dot stab, no ckt closer (ex-Tom Perera W1TP, now Boris Svagelj S57LO)

1939 6577 Standard, no dot stab. 1 weight, wrong paddle (ebay 3/09 ex-Don Iverson)

1939 6602 Standard, no dot stab. nice cond, both weights, with box. (ebay 8/2013 --> Jim N5KY)

1939 6618 Standard

1939 6673 Standard, w/box & modern? cord

1939 6676 Standard, w/ box and adv paper / on ebay 12/2011 with box

1939 6679 Standard

1939 6692 Standard, nice condition. Chipped paddle. W1IMQ 5/2012 #512BRG; Fabio IK0IXI 7/2012

1939 6727 Standard, excellent condition. Pete W5PEH (ex-Richard Maxwell Jr K3BL SK, his widow put it on ebay 6/08; on ebay 8/09)

1939 6736 Standard, exc. condition, weight screws missing. Ebay 2/2013 -> Mark M6BRN

1939 6737 Standard, complete, good condition, crack in paddle (ebay 8/2010)

1939 6743 Standard

1939 6756 Standard

1939	6758	Standard, mint w/ box (Randy AG4NA)
1939	6775	Standard, one weight, non-original paddles (serial no. 5 stamped over a 4) W1IMQ 4/1993
1939	6799	Standard
1939	6811	Standard, one weight, missing knob and orig. paddle. On ebay feb.2015, april 2015
1939	6851	Standard, one weight, chipped paddle (Ron W9EOA)
1939	6863	Standard
1939	6881	Standard, nice condition. K5VT estate (on ebay 5/12)
1939	6886	Standard, (Dave WA3LKN)
1939	6890	Standard
1939	6911	Standard, pendulum (and weights) totally missing. On ebay 5/2010

NOTES: (See the Mac-Key page for identification photos)

- A. 1935 models: The "Shallow vee" is the earlier model with the fixed contact connector bars meeting high on the frame, forming a Shallow (large) included angle. On the late 1935 "deep vee" variation the bars meet low on the frame forming a deep or smaller included angle.
- B. GAD, GA: During the 1935 model run the lower lever pivot hole in the base, previously a blind hole accessed from above, was extended fully thorough the base, obliterating the final letter in the abbreviation of "guaranteed" in the cast lettering under the base. Originally reading GAD, it then read GA followed by the hole.
- C. The 1934, 1935 and early 1936 bugs had Two paddles. Later bugs had the usual thumb paddle and finger knob.
- D. 1936A split conector bar: The U-bar holding the fixed contacts was in two pieces (each "L" shaped) on the very early 1936 models.
- E. 1936A, B: Early bugs through the 1936A had a cast brass lever pivot assembly. During the 1936 model run, the main (or dot) and dash levers were cut from steel bar stock, creating the 1936B and later models. It still retained separate pivot points for the main (dot) and dash levers. (See 1938B, below.)
- F. The "x" (as in 1936x) indicates that I am lacking information to fully classify the key.
- G. The "1937" models are civilian models of the Navy bug. There are three (possibly four) known variations, which are identified by the legend on the left side.
- H. 1938A, B: Part way through the 1938 models McElroy changed the steel-bar pivot from having separate pivot points for the main (dot) and dash levers, to the Vibroplex "bent-lug" design having a common pivot for both levers, resulting in the 1938B and following models.
- (H, cont'd) 1938B Standard, : Notations that it has no dot stabilizer or circuit closer does not mean that it should, it merely serves to verify that this model was not so supplied.
- J. The "dot stabilizer" (dot spring pre-tensioner) used on the 1938 Deluxe models came in two styles. The early large style has the tensioning finger set in a block on the pendulum and the dot contact attached to the block. The later thin style holds

the tensioning finger only, the dot contact is separately attached to the pendulum.

Mac-Key bug weights

Key collector Tom Perera reminded me that, like a lot of bugs, many Mac-Keys are found missing their pendulum weights, so at his suggestion I am including this information on McElroy bug weights for those who may want to make their own. First I note that the Mac-Key pendulum diameter is 3/16", so that weights for the Vibroplex bugs (pendulum diameter 5/32") will not fit unless they are drilled out. In any case, the Vibroplex weights (5/8" diameter) are smaller than even the smallest Mac-Key weight (3/4" diameter).

All Mac-Key weights should be drilled to fit a round 3/16" diameter pendulum. The weights are brass. The earliest Mac-Key weights are unplated; some in 1935 were chrome plated, some following ones were cadmium plated, and pretty much all of the later weights were chrome plated.

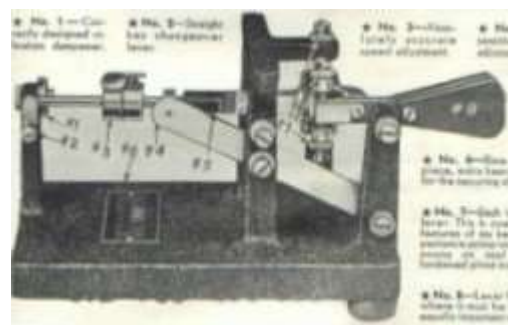

-- Early Mac-Key weight (1934 to early '36 with split connector bar): 1" diameter, 3/8" thick.

-- Mid Mac-Key weight (1936 to 1939 models): 7/8" diameter, 5/16" thick.

-- Late Mac-Key weight (A-400, P-500, S-600): 3/4" diameter, 1/4" thick.

These sizes are typical for the years and models stated but not always strictly followed.

1934 model In late 1934, Ted McElroy came out with his first telegraph key. This bug is shown here in the ad from the December 1934 issue of QST magazine. Not many were made as McElroy soon added an improvement to the design (see the 1935 model). He then "recalled and changed over about 100 [1934 model] keys" (R/9 Magazine, February 1935). It is more likely that he traded the owner a new 1935 model for the 1934s and then either modified or destroyed the earlier models. Brass nameplate. Note the *single* angled, cantilevered steel bar as viewed from the left side

1934 model Here is a photo of a 1934 Mac-Key. It can be readily distinguished from later Mac-Keys by the cantilevered bar holding the fixed dot contact. A small clip at the damper post (see below) can be used to lock the pendulum and the key can be turned on its left side and operated as a straight key; this feature was continued through the 1936 model.

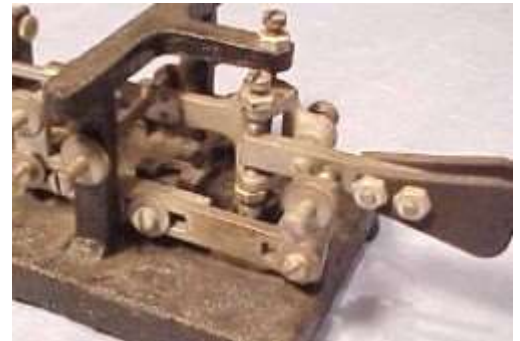

The cast legend found on the bottom of the 1934 - 35 - 36 models identifies the early keys as a Mac Key, and its maker T.R. McElroy as the world's fastest radio telegrapher. The very top line (obscured on some castings) indicates that a patent was applied for. That may be so, but one was never issued. The date 9-34 appears on all of the first three models, causing some to think that the later '35 and '36 are a 1934 bug. On the 1934 and early 1935 models the abbreviation in the center line was "GAD" (for guaranteed).

Late '35 and all '36 models have the lower pivot screw accessible from the bottom, creating a hole and eliminating the last letter, and the abbreviation appears as "GA."

This is the cast brass lever pivot assembly found on the 1934, 35 and (shown here) early 1936 models.

The pendulum clip on the 1934 and 1935 models was a small metal tab held to the damper support with a screw. The clip on the 1936 models was wire (shown here on a 1936A with a special extensible pendulum for slow speed). Click on the photo for another view.

The nameplate used on the 1934, 35 and early 1936 models measured about 7/8 x 2-3/8 inches, and was brass.

1935 model Within a month of initial production, McElroy modified the 1934 model to give greater rigidity to the fixed dot contact by adding another cast post, and connecting the fixed contacts with two bars forming a Vee where they meet at the pivot frame. The resulting 1935 model is shown above right. Shown is an early 1935, with "Shallow Vee" bars; on later 1935 models the bars met lower on the pivot frame upright resulting in a "deep Vee" variation.

1936A model The 1936 models are identified by the U-shaped connector between the fixed dot and dash contacts. On the very earliest 1936 model, the connector bar is in two pieces (two L-shaped bars joined at the center to form a U) as shown here. I call this variation the "split U-bar."

1936A model The connecting wire terminals on the earliest split U-bar 1936A bugs. They are conveniently located on the right side. Unfortunately, this feature would be gone when the one-piece U-bar appeared. Only about a half dozen of the early split U-bar 1936A bugs are known.

1936A model This is the later, common style of U-bar found on 1936 Mac-Keys. It is one piece. The wire terminals were now far apart, one on the damper post and the other at the front left U-bar mount.

Sometime early in the 1936 model run the small nameplate became aluminum, as shown here.

1936B model: type 2 pivot. The late 1936 Mac-Keys (1936B models) have their lever pivot formed from steel bar stock. There are still separate pivots for the dot and dash levers.

1936B model with terminals McElroy finally realised that the location of the wire terminals on the Mac Key was inconvenient, so he started putting them on the base of the late 1936B models. He also made them available to Mac Key owners who would make the modification themselves on earlier bugs.

Junior This model used sheet metal for the base and pivot/contact support. It was identified by a decal on top of the pivot support (which is often faint, or missing). The Junior first had the type A cast pivot, and later the type B steel bar pivot.

Navy model Until the mid-1930s it was U.S. Navy policy that "Such 'bug' type keys as there are in use throughout the service are the private property of the individual radioman." Whether it was an earlier inquiry from the Imperial Japanese Navy for an order of Mac Keys, or the publicity McElroy generated from that, in 1936 McElroy was awarded a contract to provide speed keys to the U.S. Navy. The military designation is CMK-26009. The design, with its new damper style and having the wire terminals on the base, begins to resemble the popular Vibroplex keys. Cast into the left side is the legend "PROPERTY OF US NAVY" (this was probably a contract requirement, since the Bunnell Navy keys also have a cast property identification).

Navy nameplate This large-size steel nameplate on the CMK-26009 used McElroy's given name, Theodore. It was, in many respects, similar to the plate that would soon be used on the 1938 and 1939 models.

1937 model The civilian version of the Navy key. Starting with left-over Navy base castings, the small aluminum nameplate was affixed, and "U.S. NAVY" was ground off so that the legend reads "PROPERTY OF." Presumably the owner would scratch his name or call letters into the blank area. There are four known variations in the cast legend on the 1937 model:

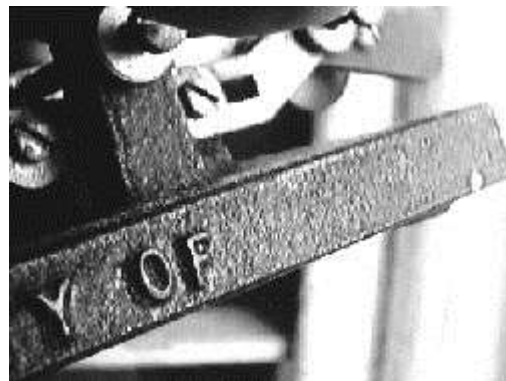

1. PROPERTY OF remainder ground off.
2. PROPERTY OF remainder cast blank.
3. Side cast blank.
4. MFD IN BOSTON MASS USA.

See the serial number pages which will give an idea of the scarcity of certain 1937 variations.

1937 model: PROPERTY OF. The most common civilian version of the Navy key is that on which "U.S. NAVY" was ground off so that the legend reads "PROPERTY OF".

On a few of the "PROPERTY OF" keys, that is the only lettering that was cast; the remainder of the original legend was cast blank. (Sometimes the grinding on the common variety was done so well that it takes a sharp eye to spot this scarce variation.)

1938B Deluxe model McElroy simplified the casting for his 1938 model, eliminating the cast damper assembly, and he used a new, large steel nameplate. (The nameplate identifies the model as either Standard, or Deluxe.) All 1938 models came in Standard, and Deluxe varieties. First came the Deluxe, which sported a circuit closer, and a "marbleite" finish on the base. The early 1938 models (1938A) still have the type 2 double pivot lever assembly. The later ones have a single pivot for both levers (type 3) as found on other bugs of the era, and as shown here.

Another feature of the 1938(A and B) Deluxe bug is the "dot stabilizer." This pre-tensioning finger comes in two varieties: an early large style, in which the block carries both the dot spring and the tensioning finger...

And a later thin style, in which the block carries only the tensioning finger.

For more information on the "dot stabilizer," see page 28.

Left-handed 1938B Deluxe model While a left-handed 1936 model had its own casting, a later "lefty" was simply a modified Mac Key: The cast base tabs holding the fixed contact connector bar were knocked off, contact posts were installed, holes for the new damper location were drilled, and the nameplate was put in a slightly different location on the base. One way to tell a factory modification is that the original nameplate holes were never drilled, as seen by the locator dimples underneath the base.

1938B Standard, model Six month after introducing the Deluxe, McElroy advertised the Standard, model. This is finished in black crackle, and has no circuit closer or dot stabilizer. By the time the Standard, came out, the separate pivots for the dot and dash levers were eliminated in favor of a single, Vibroplex-style pivot lever (thus the "B" designation). The dash lever has bent lugs and shares the pivot with the main (dot) lever.

Note that the 1938 Deluxe is found with both style pivots (that is, A and B varieties), while the 1938 Standard, model is almost always found in only the B variation. Again, see the serial number page for details.

1939 model This was the last Mac-Key to carry the large nameplate. It is very similar to the 1938 model, but the T-bar or pivot frame risers are much wider, having a "hump" that extends beyond the upper horizontal top bar. This was available in two versions, the Standard, with a black wrinkle finish, and the Deluxe, in Marbleite (shown here). The Deluxe came with a circuit closer, but typically do not have the dot stabilizer (a few early ones do have the thin stabilizer).

A-400 model. This was a short-lived (and resultingly scarce) interim model between the earlier "T-bar" Mac-Keys and the P-500. The A-400 still has a pivot frame much like its predecessors, but without the extension tabs on the horizontal bar. And for the first time we see simple posts holding the fixed contacts. The Mac-Key is beginning to take on the appearance of its more successful rival, the Vibroplex.

No. 500 and No. 600 models.

P-500 model. Finally, McElroy's bugs became similar to everyone else's semiautomatic keys. The base and frame are cast and finished in black crackle paint. This is a good, useful bug with nothing special about it except for one thing: the McElroy name on the nameplate. Cosmetic changes were made when McElroy offered this model to the Army Signal Corps. Originally, it had a black wrinkle base and chrome frame. Then the base acquired a smooth gray finish (the pivot support frame was still chrome plated). The model name had changed to **CP-500**, and then later to model **500-742**. (In keeping with models of other 1940s McElroy apparatus, the "742" likely means July 1942.)

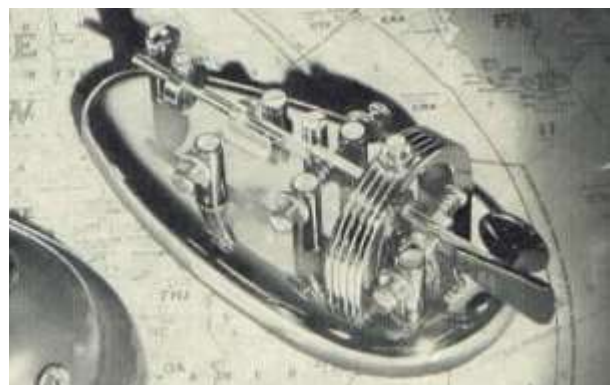

S-600 model The S-600 model, the "Super Stream-Speed," was the bug McElroy said he'd never make. "It is very poor practice to have a chrome or nickel plated base on a key," he wrote in a March 1938 flyer. He must have remembered this comment when he came out with the S-600 because he said the chrome had "a bluish tinge to prevent glare."

This key comes in two models, the S-600-PC with platinum contacts and the S-600-SC with silver contacts. It also comes in three variations of mounting holes in the base: none, two, and three.

McElroy Model S-600 with "ribs" or grooved lines on the curved frame supporting the lever pivot shaft. This chrome key may or may not have a nameplate

Telegraph Apparatus CP-810

Ted McElroy's Chicago partnership, Telegraph Apparatus Company made this bug which some call the "Hole in the Wall" bug because of the round hole in the frame. Was available in gray crackle finish or chrome plated.

The Dot Stabilizer

The dot stabilizer is a device intended to eliminate "split dots" from semi-automatic telegraph keys, or "bugs." This common fault of bugs occurs when the dot contact on the pendulum (or vibrating arm) of a bug wipes its corresponding fixed contact (mounted to a post on the base) when it makes or breaks contact, rather than firmly making or deliberately breaking contact.

The pendulum dot contact must be mounted on a spring to allow the pendulum to freely oscillate, even during the make-break cycles of the contacts. But at the moment the contacts make or break, there is no tension on the spring, so the initial make or break is uncertain and results in a scratchy dot (or a "ffft," as McElroy said in his ads).

By not allowing the spring tension to fall to zero, the make is more solid and the break more abrupt. This is done by the "dot stabilizer," which is simply a metal finger positioned to apply tension to the pendulum dot spring. McElroy added such a device to the 1938 Deluxe model. He also sold the dot stabilizer separately for 50 cents, so you may find it on other Mac-Keys, added after the fact by their owners.

The early McElroy device is a metal block that screws to the pendulum and holds the finger; this is the "thick" model (about 3/8" or 9 mm wide as measured along the pendulum axis). The dot spring attaches to the early style, mounted vertically.

The later style has a "thin" block (about 1/8" or 3mm wide). With this, the dot spring is separately mounted to the pendulum in the usual manner.

While the McElroy stabilizers may be the most common and best known, stabilizers do show up on other bugs. I found this one on a 1907 Vibroplex. It looks like a cross between the two McElroy models: the dot spring is mounted in its usual orientation, horizontally, but is attached to the stabilizer. My guess is that this is not a Vibroplex item but rather an aftermarket doo-dad offered to telegraphers by another company (or basement tinkerer).

Many handy hobbyists also made their own dot stabilizers. An article by Noel Bevan GW8IH in "Morsum Magnificat" nr. 16, Summer 1990 (p. 7) gave details on his "bug dot damper." He found it was better in eliminating the scratchiness of the dot contact than the common practice of stuffing a piece of sponge rubber in the contact spring elbow.

Update August 2014: Jim, W0EB, has announced that he will make a dot stabilizer to order for your round-rod pendulum bug (Vibroplex Original etc) or flat pendulum bug (Lightning Bug, Vibroplex J-36, etc) at around \$20 ppd in the USA (foreign shipping based on your location). Same price for an aluminum or (while supply lasts) brass block.

Shown is a brass stabilizer on a Johnson Speed-X (click on the photo for a larger view); see an aluminum one on a Vibroplex Blue Racer and a 1936A Mac-Key. You can email Jim at w0eb@cox.net
